LINEARVISION SUCCESSFULLY COMPLETES AIRBORNE VIDEOGRAPHY PROJECT FOR THE ALASCAN GROUP

SAN ANTONIO, TEXAS, March 18, 2002 - LinearVision, LLC, a leading provider of airborne and ground asset inventory and inspection services for the utility, railroad, transportation and environmental industries, successfully completed an airborne videography project for The AlasCan Group.

The AlasCan Group – Alberta to Market, was assessing the feasibility of constructing a large diameter, high-pressure pipeline to transport rich natural gas from the Alaskan North Slope to the Chicago area. The AlasCan Group contracted LinearVision to provide videography services for this project, the Alaska Gas Producers Pipeline Project Team. (AGPPT). The project involved videography of a 400-foot wide section along the proposed pipeline right-of-way from Vegreville, Alberta to Chicago, Illinois, approximately 2400 kilometers. The deliverables include oblique, forward looking, and survey, downward looking high resolution (720 x 480) digital video. The videography was geo-rectified, GPS controlled, and integrated from the LinearVision Viewer software into the AlasCan Group's existing ArcView GIS. The GIS integration allowed the client to click on any point along the proposed right-of-way in ArcView and launch the video to view imagery at that exact location. The downward looking survey video allowed users to obtain latitude and longitude coordinates by clicking on the video in the LinearVision Viewer for any point along the 2400 km ROW.

The entire digital package consisting of 60 gb of data was delivered on one external USB/Firewire hard-disk.

Mark Reimer, LinearVision VP of Operations, stated, “The LinearVision solution allowed The AlasCan Group to review the entire proposed right-of-way without ever leaving their offices in Calgary. Latitude and longitude coordinates could be established for many features along the route from the LinearVision Viewer. This greatly reduced the amount of field work that the AlasCan Group would have to perform.”

About LinearVision, LLC

LinearVision, a subsidiary of Apex Data Services, Inc., specializes in aerial data capture and inspection services for the utility, railroad, transportation and environmental industries. Service offerings include aerial low-level surveys, digital high-resolution video, integrated digital still images, DGPS survey, laser ground surveys and optional Infrared inspections. LinearVision’s surveys have the highest video and imagery resolution seen in the industry. Established in 2000, the company has offices in San Antonio, Texas and Victoria, BC, Canada. Visit LinearVision on the World Wide Web at www.apexinc.com.
